

What Is Claimed Is:

1. A functional cDNA chip for meat quality evaluation and screening of specific genes comprising a probe comprising fat
5 specific genes specifically expressed in the muscle and fat tissues of swine and a substrate on which the probe is immobilized.

2. The functional cDNA chip according to claim 1, wherein the probe DNA includes collagen, fibronectin, inhibitor of
10 metalloproteinase 3 and integrin β -1 subunit.

3. A kit for meat quality evaluation and screening of specific genes in swine comprising the functional cDNA chip having fat specific genes according to the growing stages in swine, as
15 defined in claim 1, integrated thereon, Cy5-dCTP or Cy3-dCTP bound cDNA from RNA of the tissue to be screened, a fluorescence scanning system and a computer analysis system
